USD Core

A USD-Pegged Digital Payment Token

A technical and operational overview of USD Core (USDCO), a BEP-20 token deployed on the BNB Smart Chain, designed to function as a stable, dollar-denominated instrument for digital payments.

Version 1.0

July 2026

Overview

USD Core (USDCO) is a BEP-20 token deployed on the BNB Smart Chain in July 2026. It is designed to serve as a USD-pegged digital payment instrument, enabling fast, low-cost, and borderless value transfer between individuals and businesses.

The token maintains a target parity of $1 \text{ USDCO} = 1 \text{ US Dollar}$ and is actively traded on decentralized exchanges including PancakeSwap V2, OKX DEX, KyberSwap, and MEXC DEX+. The smart contract is fully open-source and verified on BscScan.

USD Core is built for practical use, not speculation. Its primary purpose is to provide a stable, dollar-denominated medium of exchange on the BNB Smart Chain ecosystem.

The Problem with Traditional Payments

Cross-border payments through traditional banking infrastructure remain slow, expensive, and exclusionary. International transfers can take 3–5 business days and incur fees ranging from 3% to 10% of the transferred amount. Many individuals and businesses in emerging markets lack access to reliable banking services altogether.

Existing cryptocurrency solutions address some of these challenges but often introduce new problems: price volatility makes them unsuitable as a reliable medium of exchange, while high gas fees on some networks limit accessibility.

USD Core addresses these problems by combining the stability of the US Dollar with the speed and efficiency of the BNB Smart Chain — offering near-instant settlement at a fraction of a cent in gas fees, with no intermediaries required.

Technical Specifications

PARAMETER	VALUE
Token Name	USD Core
Symbol	USDCO
Blockchain	BNB Smart Chain
Standard	BEP-20
Contract Address	0x7FD2902E444475c266abf6014C19809F411Ccd39
Total Supply	20,000,000,000 USDCO
Decimals	18
Buy Tax	0%
Sell Tax	0%
Mint Function	No
Source Code	Open-source, verified on BscScan
Launch Date	July 2026

The smart contract is written in Solidity and verified on BscScan. It contains no hidden functions, no buy/sell taxes, and no blacklist functionality. The contract source code is publicly auditable by anyone.

Token Distribution

A total supply of 20,000,000,000 USDCO tokens was minted at launch. There is no vesting schedule, no private sale allocation, and no complex token distribution structure. All tokens are held for distribution to users, businesses, and payment partners as the ecosystem grows.

ALLOCATION	AMOUNT	PURPOSE
Circulating Supply	20,000,000,000	User distribution & payments
Max Supply	20,000,000,000	Fixed — no additional minting
Team Allocation	None	—
Investor Allocation	None	—

The supply is fixed. No additional tokens can be minted after launch. This ensures price stability and prevents dilution of existing holders.

Practical Applications

USD Core is designed for practical, real-world payment use cases. The following scenarios represent the primary intended use of the token:

Primary Use: Dollar-denominated digital payments between individuals and businesses, without the need for traditional banking infrastructure.

Cross-Border Payments: Individuals can send dollar-equivalent value to recipients anywhere in the world. Transactions settle in seconds and cost only the standard BNB Smart Chain gas fee, which is typically less than \$0.01.

Business Payments: Merchants and freelancers can receive payment in a stable, dollar-denominated currency without exposure to cryptocurrency price volatility. USDCO provides a reliable unit of account for invoicing and settlement.

On-Chain Commerce: Businesses operating in the BNB Smart Chain ecosystem can use USDCO as a payment instrument for goods and services, enabling stable, programmable payments without fiat currency infrastructure.

Contract Security

The USD Core smart contract has been designed with security and transparency as primary considerations. The source code is fully open-source and verified on BscScan, allowing any party to independently audit the contract.

SECURITY CHECK	RESULT
Honeypot	No
Buy Tax	0%
Sell Tax	0%
Hidden Mint Function	No
Blacklist Function	No
Open Source	Yes
SolidityScan Score	90.81 / 100
GoPlus Security	No risks found

An independent third-party security audit is planned for Q1 2027 as part of the project roadmap.

Development Plan

USD Core follows a phased development approach, prioritizing token stability, community growth, and exchange listings before expanding into broader ecosystem integrations.

Q3 2026 · Completed

Launch

- Token deployment on BNB Smart Chain
- Smart contract verification
- PancakeSwap V2 liquidity pool
- GeckoTerminal listing
- Website launch
- Telegram community launch

Q4 2026

Growth

- CoinGecko listing
- CoinMarketCap listing
- BscScan token page
- Expanded holder base
- Liquidity growth

Q1 2027

Expansion

- CEX listings
- Business payment integrations
- Increased liquidity pools
- Third-party security audit

Q2 2027

Ecosystem

- Payment API for merchants
- Multi-chain expansion
- EUR-pegged token launch
- Full reserve transparency

Project Team

USD Core is developed and maintained by an independent team of blockchain developers based in Spain. The team has expertise in smart contract development, BEP-20 token deployment, and digital payment systems.

For inquiries, partnerships, or business-related communications, the team can be reached at **info@usdcotoken.com**.
